Anything bigger than that is going to be. 2" opening on top. You'll need to grind down the top. LAWMAKERS APPOINT ACCC INITIATIVE COORDINATOR LAWMAKERS APPOINT ACCC INITIATIVE COORDINATOR UPDATE: On Friday, Sept. 27, Texas Senate Bill 3466 passed. The bill, which will help workers in Texas under the age of 18 with the legal age to work, was written by Senator Bryan Hughes, and supported by the Coalition for Workers. Read More... Greenhouse Solutions' Lawmakers are working to make their communities more eco-friendly by ensuring that our employees have access to a Healthy Workplace, promoting healthy living and sustainability for the environment and supporting the economic viability of our community. We are proud to be a part of and support ongoing initiatives and efforts that will have a positive impact on the environment, the employees who make it possible and the communities in which we live and work. Here are some of the bills that are near and dear to our heart: SB 892 and SB 1052 allow employers to impose a blanket ban on smoking in their workplaces, even if this goes against their religious beliefs. SB 3466 establishes a work age for minors of 17, as per federal law. SB 347 and SB 416 close the wage gap for Lone Star workers in the Retail Trade sector and increase pay for workers in Retail Trade sectors. As

a part of this year's Sustainable Austin Summit, we will be partnering with the city of Austin to install solar panels on the building roof.

I am using the following code to do this: import os dirname = os.path.join(os.path.dirname(__file__), os.path.pardir) file_list = os.listdir(dirname) When the directory is in the same directory as the code and I type python file.py, I get the following output: >>> If I move the file.py file to it's own directory, say, on desktop, I get: >>> My main problem though is, is that the file_list = os.listdir(dirname) returns the entire directory instead of just

the list of the files in the directory. Can anyone help? A: Try using os.walk:
import os
dirname = os.path.join(os.path.dirname(__file__), os.path.pardir) for
root, dirs, files in os.walk(dirname): for filename in files: print os.path.join(root,
filename) or for a single file import os
dirname = os.path.join(os.path.dirname(__file__), os.path.pardir) for root, dirs, files in
os.walk(dirname): print os.path.join(root, 'text.txt') or for
